Examiner's Amendment

An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. § 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the Issue Fee.

Claims 10-24 are cancelled as being drawn to non-elected inventions in an election made without traverse.

Applicant's right to file divisional applications on the non-elected inventions is acknowledged.

Reasons For Allowance

The present invention is a system for controlling fuel flow to a gas turbine engine in response to the calculated calorific value of a gaseous fuel. Systems for regulating fuel gas flow to gas turbines are well known in the art as shown, for example, by the cited Rowen et al and Yamada et al patents. Analyzing devices for determining fuel gas properties are also well known in the art as shown, for example, by the cited Searle and Meyer patents. None of the cited references however show or fairly suggest a gas turbine fuel control system which regulates fuel gas in response to gas caloric value calculated on the basis of detected combustion air flow rate and combustion gas oxygen

concentration as specified in the present claims. The claimed invention is therefor considered patentable over the art of record.
